

CoolCram Demo For (1Y0-218) Citrix Metal Frame 1.8

1. You have deployed several load-balanced applications using a MetaFrame server farm that you administer in Los Angeles, California. The end-users that you support access your load-balanced applications via the ICA Master Browser in your server farm. You are contacted by a representative from a group of users located in London, England that want to access the load-balanced applications offered by your server farm. The London users already access other load-balanced applications offered by MetaFrame servers located in London. When the London users browse the network looking for you applications the ICA Client software only list the applications that are offered by their local network in London. How will you enable the London user to access your applications?

- A. Add the IP address or DNS name of one of the MetaFrame servers in the London network as an ICA Gateway using the Published Application Manager utility on one of the MetaFrame servers in the Los Angeles server farm.
- B. Add the IP address or DNS name of one of the MetaFrame server in the London network as an ICA Gateway using the Load Balancing Administration utility on one of the MetaFrame serves in the Los Angeles server farm.
- C. Ask the System administrator responsible for the server farm in London to add the IP address or DNS name of one of the MetaFrame servers in your server farm as an ICA Gateway using the Published Application Manager utility on one of the MetaFrame servers in his network.
- D. Ask the System Administrator responsible for the server farm in London to add the IP address or DNS name of one of the MetaFrame servers in your server farm as an ICA Gateway using the Citrix Server Administrator on one of the MetaFrame servers in his network.

Answer: D

2. What is NOT a benefit of MetaFrame's load balancing feature?

- A. High availability.
- B. Increased scalability.
- C. Server fault tolerance.
- D. Simplified system administration.

Answer: C

3. Which statement is true about client clipboard mapping?

- A. It cannot be disabled.
- B. It is set on per user basis.

- C. It synchronizes the clipboard an all ICA clients with the clipboard in the MetaFrame server.
- D. It allows text and graphics to be cut, copied and pasted between applications running on the server and the workstation.

Answer: D

4. A sustained Disk Queue Length value of 1.4 times the number of spindles making up the physical disk(s) in a MetaFrame server indicates a need to upgrade the server's disk subsystem.

- A. True
- B. False

Answer: B
