

**** CoolCram Demo for (50-634) NDS Design & Implementation ****

Which is NOT a benefit of a good NDS design?

- A. Makes it more difficult to expand the network as users and services grow and change.
- B. Fault tolerance is provided which reduces the impact of equipment failure.
- C. Users have an easy time locating network resources and services.
- D. Administrators can easily name and locate network resources.
- E. Administrators can easily manage network security.

Which NDS design strategy involves optimizing the NDS for the encountered network resources, conditions and any changes that can be anticipated?

- A. Design based on function.
- B. Design based on organizational structure.
- C. Design based on workgroup needs.
- D. Design based on network layout.

You are a consultant hired to design and implement a NetWare 5 network. The company you are working with has three Microsoft LAN Manager servers, three NetWare 3.12 servers, and two NetWare 2.15 servers in one location. All of the servers will be upgraded to NetWare 5. There is also a peer-to-peer network, although you do not know how many users participate. Which of the following design and implementation process steps can be skipped? (Choose two)

- A. Determining a partition and replication strategy
- B. Creating an accessibility plan
- C. Designing the NDS tree
- D. Planning a time synchronization strategy

Which of the following best describes the recommended use of user login scripts when designing accessibility guidelines?

- A. they should be used with container objects
- B. they should be used in conjunction with container login scripts to create a common environment
- C. they should be used with profile objects
- D. they should only be used if absolutely necessary

Whose role is it to determine the efficiency of the NDS design over the WAN?

- A. Project Manager
- B. Workstation Expert
- C. Server Administrator
- D. Connectivity Specialist
- E. NDS Expert

(Note: Demos don't contain the answers which come with the released guides.)
